

Habitat — Binary Distribution Notes

1.0 Release | CSRocks Inc.

1. Installation & Access

Habitat is a mobile application built with React Native (Expo). No local installation is required for end users. The 1.0 release is accessible via Expo Go or a direct build link.

1.1 Accessing the 1.0 Release

Android:

<https://expo.dev/accounts/swethavanith/projects/mobile/builds/2271a259-1dd6-487e-8c0e-a6daae9479e1>

iOS:

<https://expo.dev/accounts/swethavanith/projects/mobile/builds/8de500fe-26b8-4a97-96f7-95682b0f054f>

Option A — Real Device (Expo Go)

1. Install Expo Go from the App Store or Google Play.
2. Scan the QR code (or navigate to the appropriate deployment link above) to launch the app.

Option B — Emulator / Simulator

1. Download the appropriate binary from the appropriate deployment link above:
 - Android: **.apk** file
 - iOS: **.ipa** or **.app** file
2. Open your Android emulator (Android Studio) or iOS simulator (Xcode).
3. Drag the downloaded file into the emulator/simulator window.
4. The app will install and can be launched from the emulator/simulator.

1.2 Test Account

- Pre-seeded test accounts are available for evaluators:
 - Test Account (view general user)
 - Email: **test@test.com**
 - Password: **password123**
 - Badge Account (view all possible badges)
 - Email: **badge@badge.com**
 - Password: **password123**
 - Wrapped Account (view Wrapped functionality)
 - Email: **john@habitat.com**
 - Password: **password123**
- Evaluators may also register a new account from the registration screen.

1.3 Supported Platforms

- iOS (primary development and test target)
- Android (supported via Expo Go; not independently verified for all builds)

2. Working Features

The following features are fully implemented and operational in this 1.0 release. Each operation initiates at the client, reaches the backend server, and returns a response to the client.

2.1 User Authentication

- User registration with email and password
- Login and logout
- Session persistence across app restarts
- Basic profile storage: display name, email, timezone

2.2 Habit Management

- Create a new habit with name, category, frequency, and schedule
- Edit an existing habit's details
- Delete a habit

2.3 Dashboard

- Displays all active habits for the current day
- Swipeable card stack view for individual habit cards
- Streak calculations and progress reflecting daily completions
- View *Social/Friends* feature

2.4 Habit Check-In

- One-tap to mark a habit complete
- Expandable feedback section after marking completion:
- Difficulty rating (1–5 scale)
- Free-text notes field
- Notes and difficulty ratings can be added retroactively from the Calendar View

2.5 Individual Habit Detail Screen

- All habit details populated from the creation form
- Edit button to modify habit details
- Completion metrics: current streak count and total completion rate
- Calendar-style dot grid showing completion history

2.6 Calendar View

- View habits scheduled for each day
- See which habits were completed on past days
- Tap any past day to view or retroactively add notes and difficulty ratings
- Edit check-ins on current or previous days
- Remove check-ins on current day

2.7 Profile & Settings

- Edit display name, email, and timezone
- Change password (via server-side update)

- Theme preferences and tutorial replay can be toggled (preference is saved)

2.8 Habit Stacking Algorithm

- Automatically activate habits based on user consistency
- Prioritize habits and keep only the highest-priority habit active
- Deactivate lower-priority habits until consistency improves
- Notify users when new habits become available
- Allow users to manually activate habits early if desired

2.9 LLM Habit Suggestions

- Enter a goal to receive habit recommendations
- Generate habits based on user-defined goals
- Review suggested habits before adding them
- Add suggested habits directly to the habit list
- Regenerate suggestions for alternative results

2.10 Habitat Wrapped (Weekly)

- View a weekly summary of habit activity
- Receive a personalized animal archetype based on performance
- View snapshot cards summarizing weekly behavior patterns
- View an AI-generated weekly reflection summary

2.11 Points & Gamification

- Earn points based on completed habit check-ins
- View total points within the app
- Track progress through streaks and completion metrics

2.12 Social/Friends Features

- Search for other users
- Send and receive friend requests
- Accept or decline friend requests
- View a list of friends
- Remove friends
- View friends' public habits and habit progress

2.13 App Theme (Light/Dark/Nature)

- Select between Light, Dark, and Nature themes
 - Save theme preference in user settings
 - Apply selected theme across the application
 - Persist theme preference across sessions
-

3. Feature Status Summary

Feature	Status
User Authentication	Working
Habit Management (Create / Edit / Delete)	Working
Dashboard (Card Stack + Progress Bars)	Working
Habit Check-In (One-Tap + Feedback)	Working
Individual Habit Detail Screen	Working
Calendar View	Working
Profile & Settings (Edit, Password)	Working
Habit Stacking Algorithm	Working
LLM Habit Suggestions	Working
Habitat Wrapped (Weekly)	Working
Points & Gamification	Working
Social / Friends Features	Working
App Theme (Light / Dark / Nature)	Working
Push Notifications	Not Implemented (2.0)
Locate Professionals Map	Not Implemented (2.0)
Chat feature	Not Implemented (2.0)

4. Known Issues & Bugs

All known issues have been logged in the project issue-tracking database ([GitHub Issues](#)). The following bugs are acknowledged in this release:

BUG#0029 — Settings: Non-functional options rendered in UI

- Severity: Low
- Description: The settings option to toggle Notifications is visible but not yet implemented. This option saves state locally but has no effect on app behavior.
- Workaround: None. These settings are placeholders for Release 2.0 features.
- Status: Open — Won't Fix (2.0 Release)

BUG#0031 — Axios backend errors surfacing in frontend

- Severity: Medium
- Description: Raw Axios error messages from backend API calls are displayed directly in the frontend, leading to poor user experience and lack of user-friendly messaging.
- Workaround: None. Errors are informational only. Dismiss errors.

- Status: Open — Won't Fix (2.0 Release)

BUG#0036 — Password reset timer

- Severity: Low
- Description: The password reset option on the login page gives users very little time.
- Workaround: None.
- Status: Open

BUG#0038 — App crash on excessive page navigation

- Severity: High
- Description: Due to state management/memory issues, rapid or excessive navigation between pages can cause the app to crash.
- Workaround: Avoid rapidly switching between screens.
- Status: Open

BUG#0040 — Sign-up page submission delay

- Severity: Low
- Description: Once a user registers, the submission towards creating the account takes a while.
- Workaround: None.
- Status: Open — Won't Fix (2.0 Release)

BUG#0060 — Tutorial videos not rendering on time

- Severity: Medium
- Description: Tutorial videos experience delayed rendering or appear as black screens initially on some devices (particularly Android). This impacts the onboarding experience.
- Workaround: Wait for videos to load or restart the tutorial after some time.
- Status: Open — Won't Fix

BUG#0066 — Tutorial buffer overload on Android binary release

- Severity: Medium
- Description: The onboarding tutorial may overload buffers on Android builds due to multiple videos loading simultaneously. This causes slow performance and app crashes.
- Workaround: None. Restart app if performance degrades.
- Status: Open — Won't Fix

BUG#0071 — Settings: Habit stacking toggle not wired

- Severity: Medium
- Description: The habit stacking opt-in toggle in Settings is visible but not implemented. This option saves state locally but has no effect on app behavior.
- Workaround: None.
- Status: Open — Won't Fix

BUG#0072 — Dormant habits visibility on dashboard

- Severity: Medium
- Description: Dormant habits are currently hidden from the dashboard instead of being visually grayed out and tappable. This prevents users from manually activating habits as intended.

- Workaround: None.
- Status: Open — Won't Fix

BUG#0073 — 5-day snooze notifications are not implemented

- Severity: Low
 - Description: The option to snooze notifications for 5 days is not currently implemented. This issue does not trigger any scheduling or delay behavior.
 - Workaround: None.
 - Status: Open — Won't Fix (2.0 Release)
-

5. Features Not Yet Implemented

The following planned features are not present in this 1.0 release. They are targeted for Release 2.0 and are documented in the updated SRS/SDS.

- Push Notifications — habit reminders and stacking prompts.
 - Locate Professionals Map — locate healthcare professionals near the user.
-

6. Deployment Notes

- Backend: Node.js / Express, deployed on Render.
 - Database: PostgreSQL managed via Prisma ORM on the server. No local database setup is required for evaluation.
 - Frontend: React Native / Expo SDK 54.
-
